## Project Title

EduGuide

## Aim/Objectives

1. To provide students with flexibility in choosing the subject and to register the number of people in class.
2. To allow administrators to manage tutor assignment, availability, and workload.
3. To create a structured platform that supports personalized learning and project guidance.

## Description

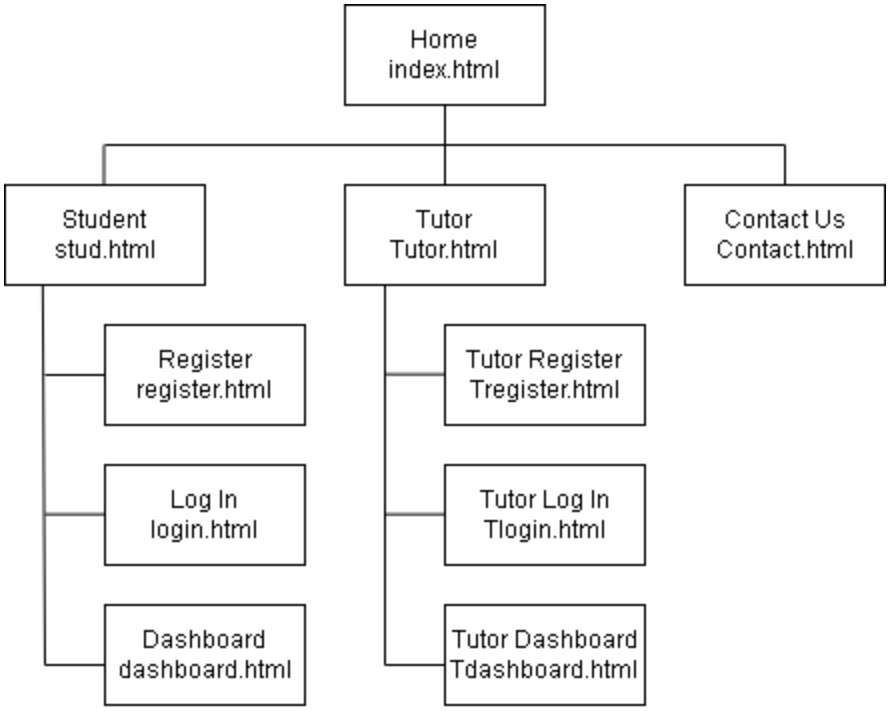
EduGuide is a web application designed to connect students with personal tutors for project support and guidance. Students can register, browse available tutors, and select whether they would like one-on-one or a small group session. They can also view the tutors' availability and select a suitable time. The system then automatically matches them with a tutor based on subject expertise and availability. Tutors can register, browse available jobs, accept or reject offers from the students, and manage their tutor availability. Admins have full control over tutor profiles, assignments, projects, and homework.

### Target User

Public User: Students

Admin User: Tutors

### Site's Organization



## Date of submission: 9 JANUARY 2026 (FRIDAY - WEEK 3)
